

TurboFTP Server

High Performance Secure FTP/SFTP Server

TurboSoft develops secure file transfer client and server products which offer manageable, scalable, automated file transfer solution. Share information across the Internet efficiently, securely, and with peace of mind.

TurboSoft Inc.

Exploring High Performance FTP/SFTP

Versatility and High-End Capabilities in One

With TurboFTP Server at your side, you have all the tools you need to drive performance and attain high-quality results without compromise. Monitor your server in real-time, keep an eye on users connected to your network, and prevent unauthorized users with advanced authentication options so that you're the one in the driver's seat right from the start, and all the way to the finish line.

When searching for a FTP server program that's right for you, one thing is clear, you have a lot of questions on your mind and you need answers. You have a lot to consider and many options to choose from. Not knowing what's the best option for you as well as making the wrong decision can cost you more than just your wallet, it can cost you time, missed opportunities, and ultimately, performance. How you go about choosing a server package that not only fits your budget but is also reliable, gives you all the features that you need, and comes without the complications can be a challenging task.

It's for this exact reason that TurboSoft is proud to announce the initial release of its TurboFTP Server, a high performance, secure, scalable and management-friendly file transfer server. Not only will you be able to seamlessly monitor and transfer files between domains but you will also have advanced security and encryption protection making sure your files go where they need to without being compromised.

The TurboFTP Server runs on Windows platforms and provides regular FTP, FTP over SSL/TLS, and SFTP over SSH services with virtual domains, advanced directory access control, virtual folders, IP access control, flexible authentication options and more. Using the server's management console you can monitor and the activities of clients on any IP network and observe the performance of a domain in real time.

Didn't know you could have all this in one powerful package now did you?

High Performance, Rock Solid, Scalable, & Management Friendly

A robust engine that is powerful enough to handle multiple users but flexible enough to execute multiple tasks including remote administration, external authentication, and controlling bandwidth usage of users? Check, check, and check.

The TurboFTP Server comes with a host of advanced capabilities allowing you to efficiently manage your server. TurboFTP Server also allows you to control the max number of connections, view uploads & downloads, create domain classes, and apply IP filters. With so many features and an easy to use interface, you'll be wondering how you ever lived without it.

Do I get secure protection when I transfer my files? Absolutely.

For FTP/FTPS you get explicit and implicit SSL/TLS with industrial strength cryptography including 256-bit AES encryption. At the same time, it supports MD4, MD5, SHA-1 OTP schemes, and on-the-fly MODE-Z compression.

Can I manage my virtual system with ease? Already there.

The TurboFTP Server is designed to give you complete control over your files and allows you to manage the server's Virtual File System with a clear single hierarchy view. The virtual file system is intuitively designed with extensible virtual folders allowing for easy access to files. Discover high-end performance and cutting-edge features with TurboFTP Server today.

Features Include:

- Granular Connection Control
- SFTP over SSH
- Real Time Monitoring of Domain and Server Status
- Built-in and External Authentication
- Setup multiple virtual domains
- Certificate Creation Wizard
